This device complies with Part 15 of the FCC rules. Operation is subject to the following 2 conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.
Sample Wiring Diagram

HEAT-COOL
COOLING ONLY

STEP #3  TEST OPERATION

A. Turn the power on to the HVAC (heating, ventilation, and air conditioning) system.

B. Press the Mode button until the **HEAT** icon appears on the display. Press the Up or Down buttons until the set point temperature is 2 degrees **above** room temperature. The unit will turn on and supply heat and the fan will turn on and run continuously in low speed. Now increase the heat set point to 4 degrees above room temperature. The fan will run continuously in medium speed. Finally, increase the heat set point to 6 degrees above room temperature. The fan will run continuously in high speed.

C. Press the Mode button until the **COOL** icon appears on the display. Press the Up or Down buttons until the set point temperature is 10 degrees **below** room temperature. The heat will turn off. Within 5 minutes the unit will turn off and supply cool air.

**NOTE:** Most equipment has a time delay between cycles. This feature is defeatable on the thermostat. See the Advanced Setup section.

**Advanced Setup**

**NOTE:** Each step number is located at the top right corner of the display for easy reference.

**MODE**

Press the Mode button. While holding the Mode button, press the Override button for 10 seconds to enter setup screens.

**Override**

**IMPORTANT:** Be sure to press and hold the override button with the Mode button for a full 10 seconds.

- **Adjust the time of day clock.**

  Tip: To change by month, press and hold the override button and press the up or down buttons.

- **Select the day of the week.**

- **Display On**

  Select display operation, Full Display (On) or Minimal Display (Off).

- **Display Off**

  Select Fan operation, Fan On, Fan Auto, or Fan Off.

- **Select Heat Pump, On or Off,**

  **on**

- **Select Heat Pump, On or Off,**

  **on**

- **Select the display backlight option, On or Off after 8 seconds.**

- **Select thermostat operation in degrees Fahrenheit or Celsius.**

Press the Mode button. While holding the Mode button in, press the Override button to exit the Setup screens. If no buttons are pressed, the display will exit the setup screens after 60 seconds.

**NOTE:** For cooling only applications, H2 connection is not required.

**COMMON**

- **24 v POWER**

- **LO FAN**

- **COMPRESSOR**

- **AUX HEAT**

- **HIGH FAN**

- **CRY H2 O G2**

- **G1**

- **8 Conductor 18 gage unshielded cable from the thermostat to the equipment.**
About Advanced Features and Operation

- **MINIMUM HEAT/COOL SET POINT DIFFERENCE** — The Heat and Cool set points will not be allowed to come any closer to each other than the value set in the Advanced Setup section, Step 6. This minimum difference is enforced during Auto changeover and Program On operation.

- **ENERGY SAVING SMART FAN** — If a manual fan speed is selected, the fan will run continuously at all times, except when in Off mode, and will only run if there is a heating or cooling demand in unoccupied periods.

- **OVERRIDE** — Press the Override button during a programmed, Unoccupied period to force the thermostat into the Occupied 1 period, temporarily, for up to 4 hours. If the Override button is pressed during an Occupied period, the thermostat will be forced into an Unoccupied period and the Occupied period (1, 2 or 3), it was forced out of will be turned off, only for that day.

  During Override periods the set points may be adjusted, but they will not be remembered after Override period ends.

- **KEYPAD LOCK** — To prevent unauthorized use of the thermostat, the front panel buttons may be disabled. To disable or ‘lock’ the keypad, press and hold the Mode button. While holding the Mode button, simultaneously press the Up and Down buttons. The **Locked** icon will appear on the display.

  To **unlock** the buttons, again press and hold the Mode button. While holding the Mode button, simultaneously press the Up and Down buttons. **Locked** will disappear from the display.

- **DISPLAY BLANKING** — The thermostat display may be configured in Advanced Setup section, Step 3, to always be visible as normally expected, or may be selected Off. When selected Off, only the time of day will appear until a button is pressed. When a button is pressed the full, normal display will appear and then revert to display the time of day only, after approximately 10 seconds.

  - **DUAL SET POINT BEHAVIOR** — The adjustable set point range is: 35 to 99 degrees in Fahrenheit and 7 to 35 degrees in Celsius. When in the modes Heat or Cool, this adjustable range is unhampered. When adjusting any Auto mode, including programming Occupied and Unoccupied set points, the thermostat will not allow the Heat set point to get closer to the Cool set point than the value programmed as the minimum difference in the Advanced Setup section, Step 7.

  When entering the Auto mode from Cool mode, the Heat and Cool set point temperatures will remain spread apart by the amount that they were adjusted, prior to entering Auto mode.

  For example: If the Cool set point was set to 80 °F while in the Cool mode and the Heat set point was adjusted to 70 °F while in the Heat mode, upon entering the Auto mode the Cool and Heat set points would be 80 °F and 70 °F. **Both** set point temperatures would then move up and down together, (in this example spread by 10 degrees), by pressing the Up or Down buttons.

  To move the Heat and Cool set points closer together, enter the Cool or Heat mode by pressing the Mode button, then adjust the set point(s) closer together. Heat is limited to how close it can come to Cool in the Advanced Setup section, Step 7.

- **FACTORY DEFAULTS** — Before restoring factory defaults, set thermostat to OFF mode. If, for any reason it is desirable to return all stored settings back to the factory default settings, press the Mode button. While holding the Mode button in, press the Down button for 2 seconds. All icons will appear. Press and hold the Override button until Fd appears. All icons will appear. Press and hold in the Fan button until Fd appears. This resets all factory settings. **To calibrate room temperature**, see the Calibration section on page 4.

### Calibration

**Calibration:** Every thermostat is calibrated before it leaves the factory. Under normal circumstances there will never be a need to recalibrate the thermostat. To accommodate special needs, the thermostat may be recalibrated following these steps:

1. While holding the Mode button in, press the down button for 5 seconds. After all the icons in the display appear, release the buttons.
2. Press the Mode button twice.
3. Press the up or down buttons until the flashing number equals the current room temperature.
4. Press the Mode button to return to normal operation.
