How to wire the signal receiving unit

Connection diagram

Remote controller address (A-B selection) setting
- When two or more signal receiving units are installed in a room, a unique address can be set for each signal receiving unit to prevent interference.
- Address (A-B selection) must be changed on both signal receiving unit and wireless remote controller.
- For the details of address change (A-B selection) on wireless remote controller, refer to the owner's manual.

Test run (Forced cooling operation)

- Turn off the indoor unit power supply. Turn on the bit 4 of DIP switch SW30 on the signal receiving unit P.C. board.
- The setting change is shown below.

Group control
- Headster and follower remote controllers are operable even if they are installed to any other 4-way cassette type air conditioner (indoor unit) after the installation is completed. 
- Check the wiring/piping of the indoor and outdoor units in forced cooling operation.

LEDs on the signal receiving unit:
- OFF: Blinking (at intervals of 0.5 seconds)
- ON: Stay on
- 3 준비

Notes on installing remote controller
- When using a wireless remote controller in the remote controller holder on a wall, turn on a fluorescent light and operate the remote controller at the installation position. Make sure that the air conditioner operates normally and then secure the remote controller holder on the wall.
- When installing a remote controller that senses room temperature with the sensor, avoid the following places:
  - A place exposed to direct sunlight or warm air or direct sunlight
  - A place subject to thermal effects

Explanation to the customer
- After the installation work has been completed, execute a test run to check for normal operation and then hand the customer the Owner's Manual and Installation Manual of the wireless remote controller kit.
- Explain how to use and maintain the wireless remote controller kit to the customer according to the Owner's Manual of the wireless remote controller kit.
