WARNING

1. ELECTRICAL SHOCK HAZARD. Disconnect electrical power to the furnace and install lock-out tag before starting installation. Failure to do so could result in serious injury from electrical shock.

2. SHARP EDGES HAZARD. Sharp edges may cause serious injury from cuts. Use care when making plenum openings and handling ductwork.

3. RISK OF SCALDING. Water temperature over 125°F can cause severe burns and scald instantly. Shut off the hot water supply before disconnecting or tapping into any hot water supply line.

CAUTION

1. Do not install humidifier where freezing temperatures could occur. The water line could freeze and crack causing water damage to the home.

2. Do not install humidifier or bypass connection on the furnace cabinet.

3. Do not install humidifier or bypass connection on a plenum face where the blanked off ends of the cooling coil will restrict air movement through the humidifier.

4. Do not set humidity level above recommended or to recommended level if condensation exists on inside windows of any unheated space, as condensation damage may result. Excess humidity can cause moisture accumulation which can allow the possibility for mold growth in the home.

RISK OF PROPERTY AND EQUIPMENT DAMAGE.

5. Do not connect humidifier transformer to blower motor wiring. Premature component failure may result.

6. When installing Humidifier Control on downflow furnace, ensure blower continues to run after a heat call is satisfied to eliminate high temperatures from damaging the Control.

7. Do not install humidifier where water pressure exceeds 125 psi, since damage to the humidifier may result. Follow codes in effect concerning pressure reduction.

8. Do not install humidifier on systems with greater than 0.4 in. wg pressure differential between supply and return plenums.

SPECIFICATIONS

HUMIDIFIER DIMENSIONS

- Width (including solenoid valve): 15 5⁄8"
- Height (including drain spud): 13"
- Depth: 10 1⁄4"

BYPASS DUCT OPENING

- 6" diameter

PLENUM OPENING

- 9 1⁄2"W x 9 1⁄2"H

WATER FEED RATE

- 3 gph

ELECTRICAL DATA

- 24 VAC-60 Hz, 0.5 AMP

INSTALLATION OPTIONS

The humidifier can be installed on either the supply or return plenum of a forced air handling system and is easily reversible for installation with right hand or left hand bypass duct connections. The humidifier dimensions and serviceability must be considered when selecting the best location for the humidifier.

TEMPLATE MUST BE LEVEL
1. Remove front cover by pressing center tabs on top and bottom of the cover (1) and base (2). Pull feed tube (3) out of the water distribution tray (4). Tip the evaporative assembly forward and lift it out of the humidifier. (See Figure 1)

2. The humidifier comes assembled for left side discharge. If converting to right side discharge, the base can be rotated so round collar is facing to the right. Swap the location of the hole plug (10) and drain spud (9) if using right side discharge. To remove the drain spud, twist and push from the outside of the base.

3. Using a level, position this template at least 3 inches above the furnace housing or cooling coil, if applicable, for clearance of the drain line. Trace around template edges. Remove the template and accurately cut the plenum opening 9 1/2" x 9 1/2", being careful to avoid injury from sharp edges.

4. Place the humidifier into the plenum opening, install six sheet metal mounting screws (not furnished) at the top and sides of the humidifier interior.

5. Install a 6" collar in a convenient location using a level, position this template at least 6" upstream approximately 5 feet above floor. Do not locate Control in the direct path of furnace discharge air or drafts from open doors and windows. Do not install where operation might be affected by lamps, sunlight, fireplace registers, radiators, concealed air ducts and pipes or room occupants.

6. Reinstall the evaporative assembly back into the base, with the bottom of the scale control insert (6) sitting firmly in the inside of the drain spud (9). Push the feed tube back into the water distribution tray. (See Figure 2) Put the front cover back on. If the nameplate (11) is upside down, remove it by gently squeezing the tabs of the nameplate from inside the cover and pushing out. Rotate the nameplate so it is right side up, and snap back into place. Turn damper handle (8) to the open position "WINTER" for the heating season, or closed position "SUMMER" for the cooling season.

7. Locate and install the Manual Humidifier Control by following the instructions shown in step 7A. For Automatic Humidifier Control installation instructions, see Form IM-AHC-01 included with the Automatic Control. DISCONNECT ELECTRICAL POWER TO FURNACE BEFORE PROCEEDING!

7A. MANUAL HUMIDIFIER CONTROL INSTALLATION INSTRUCTIONS:
The Manual Humidifier Control is designed for low voltage service to control humidification equipment. An increase in relative humidity expands the nylon ribbon that opens the control switch to stop operation of the humidifier. A decrease in relative humidity reverses the process and closes the control switch.

LOCATION
For Wall Mount:
1. Locate on inside wall of living area approximately 5 feet above floor.
2. Do not locate Control in the direct path of furnace discharge air or drafts from open doors and windows.
3. Do not install where operation might be affected by lamps, sunlight, fireplace registers, radiators, concealed air ducts and pipes or room occupants.
4. The basic rules for location of thermostats also apply to humidifier controls.
5. Remove and discard foam gasket and secure control to wall over wire access opening with screws provided.

For Return Duct Mount:
1. Position manual humidistat at least 6” upstream of bypass duct connection or humidifier.
2. Avoid injury from sharp edges when cutting opening.
3. Make sure foam gasket is in place and secure control to duct with screws provided.

GENERAL INSTRUCTIONS
1. Do not attempt to repair or recalibrate Humidifier Control. Humidifiers Controls requiring service should be returned to your distributor.
2. Use Humidifier Control in low voltage (24 VAC) applications only. Install 24 VAC wiring to Humidifier Control as shown in Wiring Diagrams, opposite side.
3. Make sure no bare wires are exposed or insulation damaged. Insulation on wire should extend to head of screws.
4. Make sure all splices are mechanically and electrically secure.
5. To remove dirt or other foreign matter from nylon ribbon and control interior, dust lightly with a fine, soft brush.

8. In order for humidifier to turn on, the furnace blower must be operating and the Humidifier Control must be calling for humidity. The interface between the humidifier and the furnace to detect blower operation can be accomplished several different ways. See wiring diagrams on other side for options. Do not use furnace blower motor wiring to power transformer. Damage to equipment may result.

9. Tap into a water supply line with the saddle valve furnished. See instructions on saddle valve package. The humidifier will function with cold, hot, softened or unsoftened water. The use of service hot water (140°F MAX.) and constant blower operation will provide maximum evaporative capacity. When installing humidifier on heat pump system, humidifier must be supplied with service hot water.

NOTE: The saddle valve is designed to be fully open or closed. Do not use it to regulate water flow.

10. Connect tubing from the saddle valve to the inlet side of the solenoid valve using 1/4" O.D. copper tubing (not furnished). DOUBLE WRENCH TO PREVENT LEAKING! (See Figure 3)

11. Drain spud is designed to accept 1/2" I.D. plastic hose (not furnished). Run drain line from drain spud to floor drain. CAUTION: If hose clamp is used, do not over tighten, drain spud could crack. Make sure drain line has constant downward slope and is not kinked. NOTE: Do not sweat or directly attach metal drain line to fitting. Do not use solvent type adhesive when connecting plastic drain line, since damage to fitting could result.

12. Open saddle valve completely and turn on furnace. Turn up humidifier control so that humidifier will turn on. Allow humidifier to run until water is observed coming out of the drain line. Check to see if humidifier and saddle valve are watertight. Check operation to make sure that all electrical components function properly. Set humidifier control to level recommended in Owner’s Manual.

NOTE: BEFORE LEAVING THE JOB SITE, MAKE SURE:
1. Saddle valve is fully open.
2. All plumbing connections are watertight.
3. Humidifier functions properly.
4. Bypass damper is in proper position.

IMPORTANT! Be sure owner’s manual containing instructions for operation and warranty information is given to owner in order to avoid unnecessary calls. Warranty is void unless humidifier is installed by qualified heating and air conditioning contractor due to possible misapplication of product.
